NDLTD

Networked Digital Library of Theses and Dissertations

- <https://www.ndltd.org/>
- Mezinárodní organizace (sdružení různých institucí a konsorcií), které se věnuje problematice tvorby a uchování elektronických vysokoškolských prací.
- ETDs – electronic theses and dissertations.
- Databáze pokrývá více než 6,5 mil. záznamů.
- Jenom některé práce jsou volně dostupné v plném textu.

NDLTD

Vyhledávací možnosti

- Ze zkušeností vyplývá, že mezera mezi slovy znamená operátor OR.
- Lze používat operátory AND, OR a NOT. Je možné je psát malými i velkými písmeny.
- Ze zkušeností vyplývá, že lze používat:
 - oboustranné horní uvozovky pro frázi,
 - * pro pravostranné rozšíření.
- Je možné hledat v určitém poli:
subject:"asthma" AND subject:"education"

FAQs

Help Build Global ETD Search

[Home](#) » [Thesis Resources](#) » [Help Build Global ETD Search](#)

This page is for ETD repository managers or librarians who are interested in building an ETD repository at their institution. Most students and researchers do not need to worry about this. If you are interested in adding their libraries and graduate schools into the global ETD search, please contact us. [Click here to use Global ETD Search.](#)

NDLTD wants to build a comprehensive gateway to all doctoral and master-level theses and dissertations. This requires world-wide cooperation of all doctoral-degree granting institutions. As an organization dedicated to Open Access, NDLTD will harvest metadata from thesis repositories regardless of the participating universities' NDLTD membership status. Yet, NDLTD relies on membership dues to support this work. [Please consider becoming an NDLTD member if access to thesis research is important to you.](#)

To contribute content to Global ETD Search, a university, a research institution, or a consortium of universities must build a repository of their Electronic Theses and Dissertations (ETDs). For help in setting up a local repository, please consult [Manage ETDs](#). It is the responsibility of local repository managers to develop acceptable open-access policies with their local communities. NDLTD encourages the maximum openness feasible: full text, all data, all metadata, and

The plant project : an urban agricultural intervention in Marabastad

Description

Dissertation (MArch(Prof))—University of Pretoria, 2015.

The dissertation investigates the notion of resilience in the urban environment. The potential for architecture to adapt to the changing contexts. The study focuses on regenerating decayed urban environments using a relationship between architecture and the landscape.

stress AND cancer AND patient*

stress and lower levels of resilience. Increased knowledge of modifiable characteristics and sources of stress associated with the co-occurrence of these two symptoms will assist clinicians to identify high risk patients, and with the development and testing of interventions. In terms of Aim 6, perturbations in neurodegenerative pathways associated with the CRCI AND High anxiety classes were identified. Five neurodegenerative pathways were significantly perturbed, namely: Amyotrophic lateral sclerosis, Huntington disease, Parkinson disease, Prion disease, and Pathways of neurodegeneration - multiple diseases. Four common biological processes across these perturbed neurodegenerative pathways were identified (i.e., apoptosis, mitochondrial function, endoplasmic stress, oxidative stress). While these findings warrant confirmation, they suggest that these two symptoms may share common mechanisms across patients with cancer and patients with neurodegenerative diseases.

Author Francis, Caroline M.

Title How Information Retrieval Systems Impact on Designers' Searching Strategies Within the Early Stages of the Design Process

URL <http://eprints.qut.edu.au/16280/>  

Publication Date 2006

University/Publisher Queensland University of Technology

Abstract The purpose of this research is to investigate the influences that Information Retrieval Systems such as online Search Engines and Databases have on designers' early searching strategies. The study involves the observation of designers transforming early design language into query 'keyword' language for the operation of Information Retrieval Systems and how this transition causes a shift in early design exploration. This transformation is referred to in this research as the CLASS activity; Converting Language from Abstract Searching to Specific. Findings show a common pattern across the activity of both professional and advanced student designers. Information Retrieval Systems are seen to drive the searching process into specific, explored domains rather than stimulate an 'abstract' broad investigation. The IR systems are built upon categories that are created to manage the information content. It is these categories that require a person to use defined keywords and query sentences to operate the Information Retrieval Systems. The findings suggest that using Information Retrieval Systems prior to defining the scope of a design problem causes designers to prematurely focus on specific searching.

Subjects/Keywords design activity; industrial design; searching strategies; searching practices; information retrieval systems; design language; classification; abstract searching; specific searching; online databases; design research

Shared Research Repository
for cultural and heritage organisations

Welcome to our shared repository where you'll find research produced by our partner organisations:

- British Library
- MOLA (Museum of London Archaeology)
- National Library of Scotland
- National Museums Scotland
- National Trust
- Royal Botanic Gardens, Kew
- Science Museum Group
- Tate
- The British Museum

Visit one repository at a time, or use the search box to search and explore publications, reports, datasets and papers from across our combined content.

Abstract

Natural history museums are unique spaces for interdisciplinary research and educational innovation. Through extensive exhibits and public programming and by hosting rich communities of amateurs, students, and researchers at all stages of their careers, they can provide a place-based window to focus on integration of science and discovery, as well as a locus for community engagement. At the same time, like a synthesis radio telescope, when joined together through emerging digital resources, the global community of museums (the 'Global Museum') is more than the sum of its parts, allowing insights and answers to diverse biological, environmental, and societal questions at the global scale, across eons of time, and spanning vast diversity across the Tree of Life. We argue that, whereas natural history collections and museums began with a focus on describing the diversity and peculiarities of species on Earth, they are now increasingly leveraged in new ways that significantly expand their impact and relevance. These new directions include the possibility to ask new, often interdisciplinary questions in basic and applied science, such as in biomimetic design, and by contributing to solutions to climate change, global health and food security challenges. As institutions, they have long been incubators for cutting-edge research in biology while simultaneously providing core infrastructure for research on present and future societal needs. Here we explore how the intersection between pressing issues in environmental and human health and rapid technological innovation have reinforced the relevance of museum collections. We do this by providing examples as food for thought for both the broader academic community and museum scientists on the evolving role of museums. We also identify challenges to the realization of the full potential of natural history collections and the Global Museum to science and society and discuss the critical need to grow these collections. We then focus on mapping and modelling of museum data (including place-based approaches and discovery), and explore the main projects, platforms and databases enabling this growth. Finally, we aim to improve relevant protocols for the long-term storage of specimens and tissues, ensuring proper connection with tomorrow's technologies and hence further increasing the relevance of natural history museums.
